The BYU-Idaho Mathematics Department will be offering a Christmas session FDMAT 108T course starting Monday, December 17th and concluding Friday, December 28th.

The 1.0 credit Pass/Fail course will be supervised by Brother Goodwin and is organized for students who wish to test out of the traditional 3.0 credit FDMAT 108 course.

To qualify for the test-out option students need to

• have a passing grade in FDMAT110, 112, 221, 222, 223, 224, MATH 109, 113, or 215
• have a brief interview with Brother Goodwin to be authorized to take the class

This Christmas session will be a very short and intense approach to 108T with two optional workshop sessions (Ricks 226 from 9 a.m. to noon on December 17th and 18th) to help provide adequate mathematical review and Excel background. The 108T curriculum consists of three key elements: a statistics/probability exam, life-planning spreadsheet project, and a financial literacy exam. All three elements of the course will be conducted online via I-Learn 2.0 and therefore can be done off campus over the holiday break given proper self-discipline and motivation. Daily contact via e-mail will be maintained between instructor and students to facilitate progress through the three key elements of 108T. If you are self-motivated and enjoy using great resources to teach yourself some very practical quantitative skills, this might be the holiday course for you!

For more information, please contact Brother Shane Goodwin at 496-7534 Ricks 232-R or BYU-Idaho Continuing Education at 496-1250.

FDMAT 108T and the Christmas season: A great combination!

(Note: we will need at least 12 students to carry the class.)
